

RISHABH SHARMA

857-423-9193 | Boston, MA • sharma.rishabh@northeastern.edu • LinkedIn • Github [Portfolio](#)

EDUCATION

Northeastern University, Boston

May 2026

Mater of Science, Software Engineering Systems

3.7 GPA

Relevant coursework: Concepts of OOD, Data Science, Data Structure and Algorithm Development, Cloud Development, iOS Development

Visvesvaraya Technological University, Bangalore

Aug 2019

Bachelor of Engineering, Information Science

TECHNICAL SKILLS

Programming: JavaScript, Typescript, Html, CSS, Java, MySQL, MongoDB, PostgreSQL, C++, Swift, SwiftUI

Framework: React.js, RSC, Redux, MaterialUI, Node.js, GraphQL Spring MVC, Oauth 2.0, JUnit, Mockito, Kafka, Rest API

Tools: Github, Git, Firebase, FireStore, CocoaPods, Figma, Postman, AWS, DigitalOcean, terraform, Packer, RDS, AWS Lambda, AWS CloudWatch, Google BigQuery, GCS (cloud storage), MCP server, Docker, NGINX

PROFESSIONAL EXPERIENCE

Mabl, Boston: Software Engineer Co-op

May 2025 – Present

- Built bidirectional Jira integration automating end-to-end test failure management-auto-generating detailed tickets with DOM screenshots, failure analysis, and test run metadata, reducing manual ticket creation efforts by 75% while maintaining real-time sync across platforms.
- Developed Xray test management integration enabling QA teams to trigger mabl test execution directly from Jira at both plan and test case levels, creating a unified source of truth that reduced testing workflow overhead by 85% and eliminated context-switching between tools.
- Integrated Jenkins CI/CD pipeline with mabl test agent to automate test execution and error reporting, streamlining continuous testing workflows and enabling real-time visibility into test failures across development cycles.
- Enhanced datatable functionality with improved search and filtering capabilities, reducing time spent locating test-specific data sets and improving overall test authoring efficiency by 40%.

Publicis Sapient, Bangalore, India: Software Engineer

Jun 2021 – May 2023

- Successfully implemented a microservices-based backend using Java Spring Boot, resulting in a 15% increase in system scalability and performance
- Developed responsive front-end components with React.js and Redux, improving user interface load times by 20% and enhancing overall user experience
- Implemented CI/CD pipeline using Jenkins, automating deployment processes and reducing release cycles from weeks to days
- Integrated Elasticsearch for efficient full-text capabilities, improving search relevance by 25% and query performance by 40%

Oracle Cerner, Bangalore, India: Software Engineer

Sep 2019 – Aug 2020

- Engineered "Sentinel" data channel security system, enhancing overall data security measures by 25%
- Leveraged Hadoop MapReduce framework to orchestrate distributed data processing across multiple nodes, achieving 40% reduction in data clustering latency
- Engineered fault-tolerant messaging channels using Apache Kafka, improving system reliability by 99.99% and reducing message loss
- Implemented load balancing algorithms, resulting in 35% increase in scalability

ACADEMIC PROJECTS

Job Finder Web Scraper

Jan 2024 – Present

- Developed a Spring Boot web scraper that automates job search by extracting listings from Google Jobs using Playwright for faster and more reliable browser automation.
- Engineered a RESTful API with endpoints to search for jobs by keywords, delivering structured data in JSON format
- Built a custom MCP (Model Context Protocol) server in TypeScript enabling natural language job searches via CLI (e.g., "Find me a software engineer job in Boston") that triggers automated scraping workflows
- Created robust data extraction logic using CSS selectors with error handling for reliable job data collection.
- Built with Java 17, Spring Boot 3.5, Selenium 4.18, and Gradle with Gradle Wrapper for maintainable and scalable architecture.
- Integrated Notion API to automatically sync scraped jobs to a Notion database, creating a centralized dashboard for tracking new opportunities and application status.

Cloud-Native User Management System

Sept 2024 – Dec 2024

- Architected and implemented comprehensive AWS infrastructure using Terraform, automating deployment of VPC, Load Balancer, Auto Scaling Groups, and RDS instances with 99.9% uptime while maintaining security compliance.
- Engineered custom AMI creation pipeline with Packer and shell scripts, reducing server provisioning time by 70% and ensuring consistent Java application deployments.
- Developed scalable REST API using Java Spring Boot for user management, implementing secure authentication with BCrypt encryption and AWS Secrets Manager integration.
- Designed zero-downtime CI/CD pipeline utilizing GitHub Actions workflows and Lambda-powered SNS notifications, reducing deployment time by 85% through automated instance refresh strategies.
- Implemented comprehensive monitoring and alerting with AWS CloudWatch, tracking application metrics, API response times, and system health to maintain 99.9% uptime
- Implemented PostgreSQL database architecture with optimized schemas for user profiles and secure file handling, achieving sub-200ms response times for all CRUD operations while maintaining data integrity.
